---

## Tables

1.1	Factory laws of European countries	12–21
1.2	Development of legal minimum age for employment, and normal maximum working day for children in the United Kingdom	24–8
1.3	Ratio of students in school to population ages 5–19 and the proportion of the population voting for selected countries, 1895–1945	33–4
1.4	International comparisons of laws relating to suffrage, and the extent of voting	35
1.5	(a) State compulsory education and child labor laws in 1879–80, and (b) State maximum hours' laws affecting women in 1879–80	38
1.6	Labor-hour laws in all occupations for men, women, or minors in all States and Territories, November 1, 1899	40–3
1.7	Women and child labor laws in the United States, 1910	44–6
1.8	Duties of factory inspectors in the United States, various States, 1877–91	47–8
1.9	Maximum-hours legislation and scheduled hours, by state women, 1909–19, in the United States	49–50
1.10	(a) Minimum age of admission to industrial labor (1919), and (b) Duration of nighty recess for women	52–3
1.11	Age of legal employment and maximum legal hours of labor of children employed in factories in the United States, January 1, 1913	53–4
1.12	List of bilateral and plurilateral international agreements regarding labor questions	63–5

2.1	Labor standards as rights	111
2.2	Preferences that lead to a conflict between rights and outcomes	114
3.1	Sequential probit analysis for selected countries in Latin America: Probability that a child works	203
3.2	Sequential probit and logit analysis for selected countries in Latin America: Probability of fulltime work	204
3.3	Probability of child work and schooling for selected countries in Africa	209
3.4	Sequential probit analysis for selected countries in Asia	213
3.5	Child labor and education. Labor force participation rates, minimum age of work, and compulsory education	220
3.6	Percentage of children leaving school, by age, for selected countries, 1959–74 birth cohort	220
3.7	Probit estimates of determinants of Congressional support for labeling of cocoa products made with enslaved child labor and for fast-track trade promotion authority: US House of Representatives, 2001	253
3.8	Sequential probit results for 1994–98	264
3.9	Bivariate probit results for 1994–98	265
3.10	Variables used in the bivariate probit, multinomial logit and sequential probit models	266

## Figures

1.1	Child labor and GDP per capita	89
2.1	Competitive equilibrium in the labor market	117
2.2	A labor market with compensating differentials	121
2.3	Monopsony in the labor market	126
2.4	Multiple competitive equilibria with survival constraint	127
2.5	Unique competitive equilibrium at subsistence	129
2.6	Multiple equilibria with and without child labor	158
3.1	Member of household aged 60 and over living with grandchild	257
3.2	Rational expectations equilibria and the labor market	262
4.1	The Oecedia/Developia complaints matrix	317
