

Subject Index

- aberrant behavior 287
- abilities: behavioral 45; cognitive 35, 45, 47;
concrete operational 504; determined by
biology 539; domain-specific 50; intellectual
572, 591; mental 53; physical 591; social
47; verbal 49–50
- Aboriginals 564
- absenteeism 277, 559, 580
- abstraction 81
- abuse 244, 294, 499, 550; verbal 551, 554
- academic difficulties 276, 277
- acceptance: barrier 591; cultural mannerism of
89; group 535; maternal 103; of parental
authority 213; social 33, 358, 365, 366,
580; *see also* peer acceptance
- accommodation 82, 363
- accuracy 230, 291, 299, 523, 575; perception
365, 366, 367, 368, 369
- achievement: academic 297, 400, 401, 469, 524;
educational 90; encouragement 103; ethnic
81; low 275; school 246, 406, 574
- acquaintances 293
- acquiescence 138
- acting-out behavior 190, 276, 277
- actions: collaborative or cooperative 598;
correspondence between ideas and 69;
hostile 288, 292; negative 550; prosocial
228, 458; social 139, 480–2; structural re-
organization of 10; undesirable 106
- activities 50, 61, 98, 149, 428, 515–16, 578,
582; after-school 164; antisocial 163;
channeled in safe and productive ways 100;
children with disabilities 574; children with
severe mental retardation 577; choice or
timing of 213; classroom 344, 594;
collective 86; common-ground 308; daily
581; exclusion from many 588; family 245;
formal 164; group 485; high level 100, 102,
109; intrinsic interest in 526; joint 519;
legal 500; leisure 484; other-sex 130;
participation in 72; peer group 578; physical
131, 440, 443, 580; restrictions on 216;
rule-governed, participation in 332;
sensorimotor and dramatic 330; sex-typed
128; shared 120; social 163, 580, 581; social
interaction mostly driven by 288; solitary
582; structured 69; symbolic 429
- adaptability 98, 102; family 195
- adaptation 13, 521; evolutionary 55; family 69;
social 158, 162, 294, 299
- adaptiveness/adaptedness 44–5, 49, 50, 54, 308
- addictive behaviors 296

- ADHD (attention-deficit/hyperactivity disorder) 50, 211–12
- adjustment: academic 295, 540; differences in 232, 233; difficulties 38, 109; emotional 253, 295, 594; *laissez-faire* 89; long-term 167; marital discord and 166; outcomes 295; parenting and 244; peer group 353; poor 540; problems 168; psychological 242, 245, 250, 251, 339, 341, 537, 543; psychosocial 299; siblings and 228–30; social-psychological 542; *see also* school adjustment; social adjustment
- ADMR (average daily metabolic rate) 448
- adolescence 12, 35, 49, 126, 163; behavior 296; concepts not constructed until 476, 486; dominance 55, 56, 443; Down syndrome 577; friendships 286, 340, 341, 401; from infancy to 384–5; IQ scores 39; learning disabilities 575; lower income families 467; mental retardation in social relationships 578; motherhood 243; parental treatment and adjustment 37; peer groups 39–40, 170, 276, 341; perception accuracy 365; promiscuity 54; psychological adjustment 242; R&T 441, 442, 443, 444, 445, 448; sibling relationships 223, 224, 229; social competencies 342; time spent with friends 289; twins 31; visual impairments 582
- adoption 28, 31, 34, 190, 239; siblings 29
- adrenal glands 124
- Adult Attachment Interview 195
- adulthood 12, 276, 294, 577; preparations for 49; romantic relationships 295; self-worth 294
- advice 294, 552; parental 161, 162
- affect 106, 206, 339; infant 15; “management skills” 160; negative 317, 332–3, 336, 578; positive 150, 317, 318, 336, 361; regulation of 104; representation of 423–4
- affection 34, 209, 210, 215, 225, 320, 321, 336; greater, girls anticipate 292; overt 287; physical 66; sibling 36, 224
- Affective Discomfort 107
- affective process 81, 88, 207; markers 289; messages 312–13, 314, 322
- affiliations 213; group 55, 56, 443, 491; romantic 295
- affluent homes 537
- Africa 45, 469; collectivism 74; play time with peers of own sex 121; sub-Saharan 62, 65, 66; *see also* Algeria; Kalahari; Kenya; Liberia; Senegal; South Africa; Zimbabwe
- African Americans 88, 539; couples living in poverty 241; friendships 293; Head Start children 358; parent–child relationships 217, 218; play of low-income children 431, 432; poor, single mothers 243; siblings 233; socialization 137, 138, 142, 143, 522
- age-related factors 157, 290, 357, 363, 543; behavioral typologies 64; changes 66, 312; differences associated with 423, 496; distribution of R&T 442; gender of siblings 225; grounds of power 87; helpers 466–7; patterns 15; peer victimization 557–8; playmates chosen according to 594; *see also* early school age; elementary school age; preschool period
- aggression 10, 146, 298, 424, 469, 527; access to resources via 55; adaptive 51; aggressive behavior predicts 277; among girls and boys 533–48; associated with being disliked 295; “bullying” distinguished from 550; childrearing and 166; confrontive 398; defined 438; enmities and 285, 287; factor analysis and 33; Freud’s views on 9; frustration and 100; general measures of 355; hormones and 123; increase in 127; initiation of 319; minimized 443; overt 170, 299; peer 6, 275, 276, 294, 317, 554, 555, 556; physical 361, 363; play fighting leads to 446; proactive 539, 540; problems 31; programs developed to reduce 404; R&T and 440, 441, 445, 448, 449, 450; reactive 170, 540; “ritualized” 444; sibling 224, 225, 228, 229; social strategies 528; subscales of 30; teacher’s evaluations of 318; to mothers 66; typified 439; verbal 15, 341, 363, 535, 536, 540; *see also* indirect/relational/social aggression; bullying; physical aggression
- aggressive-disruptive behavior 541
- aggressive-rejected children 367
- alert state 69
- Algeria 494, 495
- alienation 535
- alliances 250
- altruism 51, 88, 458; reciprocal 459, *see also* prosocial behavior
- ambivalence 191, 198, 319, 320; depression, anxiety and 189; inconsistency and 184; infants show 334; understanding 314

 biological contributions to 535; bullying 562–3; cooperation and competition 522–3; emotion regulation 362; friendships 292; interpersonal communication 426–7; peer conflict 363; play 425–6, 440, 444, 447; prosocial behavior 465–6; social behaviors 47–8, 49, 117–36; social withdrawal and 342–3; symbolic representation 427–8; temperament 103, 107–8, 110–11
- sexual behavior: consent 87; experimentation with members of own sex 247; female-typical 123; male-typical 123; promiscuous relationships 249
- shame 106, 167, 313, 320; intense experiences of 320; regulating 321
- sharing 464, 467
- Sheffield 564
- “shopping expeditions” 291
- shyness 101, 170, 211, 291, 294, 593; risk associated with 297; social withdrawal and 329–52
- sibling interaction 68, 224, 231; cooperative 385; parent–child relationship may be mirrored in 251
- sibling relationships 223; aggressiveness and hostility in 225–6; development influence of 228–32; individual differences in 224–5, 227–8, 233; positive 252
- siblings 51, 126, 127, 213, 319; adoptive 29; birth of 229; bullying between 553; conflict 287; environmental influences shared by 28; “favored” 229; genetic differences between 37; hostility 109; importance of 251; normally developing, autistic children with 579; receiving affection 36; similarity 31, 32; socialization context for peer 167–8, 464; step-and half 233; total parental regard following birth of 83; *see also* older siblings; sibling interaction; sibling relationships; younger siblings
- sickle cell disease 580
- sign language 386, 592, 594; combined with spoken language 588; *see also* ASL
- signals 443, 446; emotional 161; self 311; social, ability to encode and decode 442
- signifiers 422
- similarities 286, 288, 290, 291
- “similarity-attraction” hypothesis 291
- simulation theory 379, 387
- simultaneity 314
- single-father households 246
- single mothers 244, 248; depression 243; resilience-promoting social networks for 252
- single parenthood 243–4, 245, 295
- “sissy” term 117
- Six Culture Study* (Whiting & Whiting) 26, 64–7
- skills: academic 356; acquiring 71; assertion 356; behavioral 357; cognitive 52, 275; communication 184, 275, 227, 575, 576; competitive 265; complementary 247; compliance 356; conversational 403, 406; cooperative 265; delayed communication 588; developing 515; emotional encoding and decoding 160–1; executive 381; fighting 442, 443, 444, 446; friendship-making 404; group entry 360; helping 466; hunting 443; individual 72; innate 381; interpersonal 28, 394–415, 578; language 576; manual 86; mental 86; motor 580; nonverbal joint attention 579; parents in different arrangements 245; peer relations 356; perspective-taking 331–2; play 576; problem-solving 275, 338; prosocial 398; school-related 72, 277; self-management 356; social-cognitive 275, 337, 573; social understanding 167; *see also* social skills
- skin conductance reactivity 461
- slandorous rumors 535
- sleep 69, 559
- sleeping arrangements 61, 65
- SLI (specific language impairment) 569, 570, 590, 595–9
- slights 288
- “slow learners” 572
- smiles 439, 444
- sneers 288
- snobbishness 537
- sociability 98, 101, 294, 338; friendship success positively related to 299; frontal EEG activity associated with 333; high 109; mothers 66; peer 364, 366; poor 275
- sociableness 576
- social adjustment 190, 246, 253, 356; aggression and 539, 540, 541; friends and 294, 295, 297; hemiplegia and 581; preschool play and 358; profound hearing loss and 594; social information-processing and 368
- social background 383; *see also* social class; social status
- social behavior 6, 7, 106; age-appropriate 572; Bühler’s survey of studies of 8; competent 332; complicated, strategies for 49; deviant

- 276; effective and ineffective 357; emotional signals to regulate 161; fitness and development of 51–2; incompetent 403; language and 589; maladaptive 108–11, 138, 331; mothers 65–6; negative 276, 319, 527; negative consequences for 368; older children 15; peers 273, 277; preschoolers 359; problematic 101, 575; prompting, praising and reinforcing 344; rejected status and 275; same-sex antipathies predicts 296; school context 397–407; sex differences in 49, 117–36; SLI children 597; students with moderate to severe mental retardation 577; with parents 64; *see also* aggression; antisocial behavior; asocial behavior; avoidance; bullying; prosocial behavior; withdrawal
- social class 140, 150, 151; bullying 564–5; children's understanding of 495–6; cultural context of pretend play and 428–32; differences 428, 431, 467–8; poverty, job loss and 168–9; race, ethnicity and 141, 142–3; variations in thinking about 495; *see also* lower-class; middle-class; SES; upper-class; working-class
- social cognition 50, 375–93; peer interaction influences development of 332
- social-cognitive processes 573, 576, 578; deficits 578; theory 130
- social competence 27, 101, 138, 139, 315–21, 357; adolescent 342; children with disabilities 571–87; development of 46, 140, 150, 334, 571–87; developmental tasks of 308–9; efforts to promote children's relationships with 402; friendships and 293, 296; heritability of 28; important aspect of 361; influence of social experiences 145; interdependency of emotional and 308; language and 589–90, 597–9; low 161; nascent 5; negative self-perceptions of 339, 341; peer interaction and 332; peer play and 334; peer ratings of 165; perceived 168, 339, 341; play should both reflect and promote 358; predicted 169; predictor of friendship status 294; profound hearing loss and 593–4; same-sex and mixed-sex antipathies linked to 295; social style and 142, 146; sociometric status as an indicator of 365; temperamental contributions 105–8; tripartite model 409–10; variations in 162
- social constructionists 83
- social context 265, 310, 477, 479, 483; aggressive behavior 543; effective and ineffective behaviors 357; expression of emotion 312; prosocial behavior 467–70; sex-segregated, middle childhood 369; significant 90; social skills 361
- social contracts 482
- social costs 397
- social exchanges 288, 292, 318, 362, 468
- social facts 84
- social functioning 318; adaptive 308, 356; coping associated with 317; effective 361; group 273; poor 162; profound hearing loss 594, 595; SLI children 597
- social impact 272, 273
- social interaction 12, 72, 144, 309, 357, 369, 536, 539; age-appropriate strategies 573; behavioral uniformities that serve to coordinate 477; capacities for 139; consistent, pervasive impairments in 578; disabilities 572, 573, 574; early 592; elementary school 360; enhanced 317; essential in the development of knowledge 375; facilitating 457; few opportunities for 579; friends or enemies 296; goals of participants in 516; importance of communication skills for 575; inability to observe 581; influences development of judgments 481; influences development of understanding 383; involvement in more 384–5; mostly driven by activities 288; motivation to participate in 577; observational and laboratory studies of 15; opportunities limited 580; peer 10, 142, 149; positive 148, 344, 594; preschoolers 485; problematic 108, 368, 582; profound hearing loss 593; reciprocities in 289; shy and socially withdrawn children 343; siblings 68; skills that would facilitate 344; SLI 597; social cognitive development and 385–7; styles 142, 151; theories pertaining to 331–2; videotape of 322
- social learning 5; formulations 11; mechanistic core processes/accounts of 9, 10
- social learning theory 62, 128–9, 130, 475; cornerstone of 128
- social networks 239, 251–4, 285; closely knit 469; interdependence and morality 482; opportunities to participate in a broad range of 573; parents 164–6; shopping expeditions frequently occur within 291; supportive peer 580

- social order 482
- social organization 448, 492
- social play 139, 144; children with disabilities 574; initiations of children with Down syndrome 576; pretend 419, 420, 421, 422, 429, 431; profound hearing loss 594
- social problems 539, 541, 589, 597
- social psychology 12, 71
- social relationships 79, 86, 87, 273, 541; adolescents mental retardation in 578; age-appropriate 574; appropriate ways of maintaining 162; attempt to understand 476; cognitive representational models of 161; conflictual character of 88; disabilities 572, 577; dispositional and 335; internal working models of 334; interpersonal perceptions and 368; marital conflict and 166–7; parents' influence 163; positive trusting 143; problems in 581; stable, prerequisite to developing 359; visual impairments 582; Western societies 482
- social skills 339, 597; adaptive 276; adequate 162; children with disabilities 573; children with mild disabilities 574; delayed 583; differences in 597; evidence relating R&T to 442; false-belief understanding and 384; good 297; hampered opportunities for learning 169; interventions to promote 402–3; learned during peer play 447; lower 105; mastering 286; maternal ratings of 165; meaningful variations in 15; new 164, 286; parent-and teacher-rated 106; poor(er) 107, 340, 343; R&T play and 442–3; significant gains in 579; social cognition and 353–415; social withdrawal and 337–8; training 344; variance in 106
- social status 80, 248, 266, 276, 366; behaviors that hurt 534; conflict and 363; differences 357; social aggression directed toward damaging 535
- social strategies 573, 575; difficulties generating and enacting 576
- social stratification 86, 90
- social structures 84, 89; and symbolic order 90
- social theory 83, 87; critical mode of 89
- social understanding 579; bullies tend to score higher on measures of 385; competence in 384; development of 286; executive skills and 381; language and 386–7; mild deficits in 575; siblings and 230–1, 232; social interaction influences development of 383; verbally skilled and sophisticated 540
- social withdrawal 36, 103, 159, 167, 197, 274; early inhibition associated with 102; generally viewed as a characteristic of peer rejection 276; intercorrelated social behaviors measuring 296; peer rejection and 275; shyness and 329–52; temperamental influences on development of 101; very high inhibition may be synonymous with 100
- Social Skills Rating System* 597
- sociality 8, 88
- socialization 5, 81–2, 156–9 *passim*, 208, 312, 315, 334; agents of 457, 462; alternate 39; behavioral genetics perspective 38–40; bidirectional 35; childcare and 137–55; children as collaborators in 11; children's roles in their own 30; cross-cultural studies of 63, 64; culture-specific practices 359; deviant 277; differences in 54, 460, 466, 470; ethnic 142–3, 503; events 440; familial 161, 216; gender 144; goals 213; group 55; important activity that contributes to 430; low SES children 322; most pervasive contexts 394; multiple opportunities for 144; mutual 291; parental 6, 158, 233; patterns of 89; person-centered forms of 537; political 497; practices 74; primary group 273; prosocial behavior 462–5; role of 60–2; siblings and peer relationships 167–8; successful, foundation for 210; theories of 84–5
