

Table 9.1 *Emergency intervention as a function of number of inhibitory influences on the bystander (from Latané & Darley, 1976)*

<i>Condition</i>	<i>Number of inhibitory processes</i>	<i>Level of helping</i>
1: Alone	0	high
2: Mere awareness of other witness	1	intermediate
3 and 4: Mere awareness plus one communication channel switched on	2	low
5: Mere awareness plus two communication channels switched on	3	very low

Statistical comparisons indicated that level of helping was significantly different between rows.
